技术规格

Background:	This gene encodes a member of a family of proteins containing a ribonucleoprotein (RNP)-type RNA binding motif and a carboxyl-terminal arginine-serine-rich (RS) domain. The encoded protein functions as a pre-mRNA splicing factor. There is a pseudogene for this gene on chromosome 7. Alternative splicing results in multiple transcript variants.
Applications:	ELISA, IHC
Name of antibody:	SRSF8
Immunogen:	Synthesized peptide derived from internal of human SFRS2B.
