技术规格

Background:	This gene encodes a member of the acid-sensing ion channel (ASIC) family of proteins, which are part of the degenerin/epithelial sodium channel (DEG/ENaC) superfamily. Members of the ASIC family are sensitive to amiloride and function in neurotransmission. The encoded proteins function in learning, pain transduction, touch sensation, and development of memory and fear. Alternatively spliced transcript variants have been described.
Applications:	ELISA, WB, IHC
Name of antibody:	ASIC1
Immunogen:	Synthetic peptide of human ASIC1
Full name:	acid sensing ion channel subunit 1
Synonyms:	ASIC; ACCN2; BNaC2
